## (54) PRODUCTION OF CREAMY FOAM IN EFFERVESCENT BEVERAGE

### (57)Abstract:

PROBLEM TO BE SOLVED: To simply produce fine and creamy foam having good retention of foam in a short time by applying ultrasonic wave to beverage having effervescent property.

SOLUTION: Ultrasonic wave is applied to effervescent beverage such as beer or sparkling liquor to carry out foaming. Foam instantaneously foamed from the liquid is fine and creamy and a device such as beer dispenser or skill is not required in order to produce the foam. The foaming can usually instantaneously be carried out only by pouring the beverage into a container and immersing the bottom of the container into an ultrasonic wave washer.

## LEGAL STATUS

[Date of request for examination] 19.12.1997  
[Date of sending the examiner's decision of rejection] 23.02.2001  
[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]  
[Date of final disposal for application]  
[Patent number]  
[Date of registration]  
[Number of appeal against examiner's decision of rejection]  
[Date of requesting appeal against examiner's decision of rejection]  
[Date of extinction of right]
